

**PATENT APPLICATION**

**IN THE UNITED STATES PATENT AND TRADEMARK OFFICE**

In re the Application of

Atsushi SANO et al.

Group Art Unit: 1795

Application No.: 10/591,176

Examiner: K. TURNER

Filed: August 30, 2006

Docket No.: 129277

For: DIRECT ALCOHOL FUEL CELL AND METHOD FOR PRODUCING SAME

**DECLARATION UNDER 37 C.F.R. §1.132**

I, Atsushi Sano, a citizen of JAPAN, hereby declare and state:

1. I have a Ph.D in Chemistry which was conferred upon me by the University of Kyoto in Kyoto, Japan, in 2000.
2. I have been employed by TDK Corporation since 2000, and I have had a total of 9 years of work and research experience in electrochemical devices.
3. I am a named inventor in the above-captioned patent application.
4. I and/or those under my direct supervision and control have conducted the following tests: The fuel cell of Additional Examples 1 and 2 were prepared in the same manner as in Example 1, which was prepared in accordance with the present invention (refer to paragraphs [0111]-[0113] of the present application), except for using coating liquid for forming a cathode catalyst layer wherein the coating liquid is made by compounding the materials indicated in Table 1 below in the indicated mass ratios. Example 1 of the present application is indicated below. Additional Example 1 uses cation exchange resin instead of anion exchange resin, and Additional Example 2 does not use anion exchange or cation exchange resin.

[Table 1]

	Silver-carrying carbon	8-mass% quaternized polyvinylpyridine (manufactured by Aldrich)/methanol solution (anion exchange resin solution)	5-mass% Nafion solution (manufactured by Aldrich) (cation exchange resin solution)	Water	2-propanol
Example 1	1	4	0	1	5
Additional Example 1	1	0	6.4	1	5
Additional Example 2	1	0	0	1	5

As to the obtained fuel cell, Evaluations 1 and 2 of fuel cell indicated in Paragraphs [0114] and [0115] of the present application were conducted to obtain the maximum value of output density of that time. The results are shown in Table 2 below.

When the fuel cells were disassembled after Evaluation 1 and after Evaluation 2 to check the presence of Ag corrosion, a severe Ag corrosion was confirmed in Additional Examples 1 and 2. On the other hand, no Ag corrosion was confirmed in Example 1.

[Table 2]

	Maximum output density (mW-cm <sup>-2</sup> )		Ag corrosion
	Evaluation 1	Evaluation 2	
Example 1	5	8	No corrosion
Additional Example 1	0.7	1	Corrosion is present
Additional Example 2	1.2	1.3	Corrosion is present

I hereby declare that all statements made herein of my own knowledge are true, and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine and/or imprisonment under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issuing therefrom.
